CHONDLES 45:340-34/(139/).

IN A VARIETY OF CALCIUM IONS INTO EXCITABLE CELLS AND ARE ALSO INVOLVED IN A VARIETY OF CALCIUM-DEPENDENT PROCESSES, INCLUDING MUSCLE CONTRACTION, HORMONE OR NEUROTRANSMITTER RELEASE, GENE EXPRESSION, CELL MOTILITY, CELL DIVISION AND CELL DEATH. THE ISOFORM ALPHA-1F GIVES RISE TO L-TYPE CALCIUM CHANNELS BELONG TO THE "HIGH-VOLTAGE ACTIVATED" (HVA) PHENYLALVILAMINES, BENCOTHIAZEPINES, AND BY OMEGA-AGA-IVA).

PHENYLALVILAMINES, BENCOTHIAZEPINES, AND BY OMEGA-AGA-IVA).

SUBUNIT: VOLTAGE-PEPRINENT CALCIUM CHANNELS ARE MULTISUBUNIT COMPECASES, CONSISTING OF ALPHA-1, ALPHA-2, BETA AND DELTA SUBUNITS IN A 1:1:1:1 RATIO. THE CHANNEL ACTIVITY IS DIRECTED BY THE PORE-FORMING AND VOLTAGE-SENSITIVE SUBUNITS BETA AND DELTA SUBUNITS SUBUNIT IS SUBFICIENT TO GENERATE VOLTAGE-SENSITIVE CALCIUM CHANNEL ACTIVITY. THE AUXILIARY SUBUNITS BETA AND DELTA SUBUNITS SUBUNIT IS SUBFICIENT TO GENERATE VOLTAGE-SENSITIVE CALCIUM CHANNEL ACTIVITY.

FORMING AND VOLTAGE-SENSITIVE SUBUNITS BETA AND DELTA SUBUNITS SUBUNIT IS SUBFICIENT TO GENERATE VOLTAGE-SENSITIVE CALCIUM CHANNEL ACTIVITY. THE AUXILIARY SUBUNITS BETA AND DELTA SUBUNITS SUBUNIT IS SUBFICIENT TO GENERATE VOLTAGE-SENSITIVE CALCIUM CHANNEL ACTIVITY.

SUBCULTURA TO SUBFICIENT TO GENERATE VOLTAGE-SENSITIVE CALCIUM CHANNEL ACTIVITY.

FORMING AND VOLTAGE-SENSITIVE SUBUNITS BETA AND ALPHA-2/DELTA LINKED BY A DISULFIDE BRIDGE REGULARE THE CHANNEL ACTIVITY.

FORMING AND VOLTAGE-SENSITIVE SUBUNITS BETA AND ALPHA-2/DELTA LINKED BY A DISULFIDE BRIDGE REGULARE THE CHANNEL ACTIVITY.

FORMING AND VOLTAGE-SENSITIVE SUBUNITS BETA AND ALPHA-2/DELTA LINKED BY A DISULFAR SUBUNITS BETA AND ALPHA-2/DELTA LINKED BY A DISULFAR SUBUNITS BETA AND ALPHA-2/DELTA LINKED BY A SERIES OF POSITIVELY CHARGED AMINO ACTUS AT EVERY THIRD POSITION.

FORMING AND VOLTAGE-SENSOR AND ARE CHARACTERIZED BY A SERIES OF POSITIVELY CHARGED AMINO ACTUS AT EVERY THIRD POSITION.

FOR THE VOLUME AND ACTUS AT EVERY THIRD POSITION.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             seq length: 0

The composition can be used to inhibit the proliferation of cancer or virally infected cells, or induce apoptosis in cancer or virally infected cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                06-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

                                                                                                                         The invention relates to identifying target proteins (ABB90790-ABB94016) for harbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                   Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequence from plant with nucleic acid or amino acid sequences from non-plant
                                                                                           Sequence

                                                                                                                                                       The present invention describes substantially purified human proteins CC (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 in the specification). ABN15762 to ABN27252 encode the human ORFX CC proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated CC disorder in humans, and in the manufacture of a medicament for treating a gyadrome associated with ORFX associated disorder. ORFX polyuncleotide sequences can be used in gene therapy. ORFX sequences can be used in the CC treatment of cancer, hyperproliferative disorders, cirrhosis of liver, CC psoriasis, benign tumours, keloid, degenerative disorders related to organ transplantation, cardiovascular diseases, disorders related to organ (ransplantation, cardiovascular diseases, disorders mellitus, systemic (cupus erythematosus, hypertension, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and disorders infectious (diseases, autoimmune tipscriditis, myasthenia gravis, graft-versus-host CC diseases and autoimmune inflammatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, conservation injury in various tissues and conditions resulting from the perfection or regeneration and treatment of lung or liver fibrosis.

CC reperfusion injury in various tissues and conditions resulting from the perfection of the printed disorders.

The FKHL7 protein can be produced by standard recombinant methodology. The products can be used for diagnosis, prognosis, monitoring, prevention and treatment of glaucoma. They can also be used for the production of transgenic animals and drug screening. Sequences for the production of transgenic animals and drug screening.
                              diagnostics, forensics, responsible for genetic biodiversity -
                                        New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags (C for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC and to produce other types of data and products dependent on DNA and CC and to produce other types of the invention.

CC diagnostic amino acid sequences of the invention.

CC diagnostic amino acid sequences of the invention.

CC of the sequence data for this patent did not appear in the printed content of the printed of the formal directly from WIPO are formal directly from WIPO are formal directly from WIPO are formal directly from WIPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The polymetides polymetides and careful of a mammal and prevention of disorders caused by the aberrant creatment of a mammal and prevention of disorders caused by the aberrant creative expression or activity. The polymetides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the colypeptides. Polymucleotides of the invention are used as probes and creative protein, for chromosome or gene mapping, in the polypeptides, for sequencing, for chromosome or gene mapping, in the creative production of recombinant proteins, and in generating anti-sense DNA or chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or create drugs to a tumour, in assays to determine biological activity, to raise antibodies/elicit an immune response, to determine quantitative creates antibodies/elicit an immune response, to determine quantitative creates antibodies, as tissue markers, and to isolate receptors or ligands. The collection of the invention may also be useful in treating platelet disorders, stem cell disorders, regenerating bone, cartilage, tendon, clipament and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a contraceptive, treating osteoporosis and osteoarthritis, anaemia, contraceptive, treating osteoporosis and osteoarthritis, anaemia, confident infection or from autoimmunity, cancer, allergy, asthma, viral or fingal infection or from autoimmunity, cancer, allergy, asthma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased

The invention relates to a protein comprising or having at least 50% identity to any of the 2469 amino acid sequences, identified in the specification (available on a computer readable format), or its fragment, expressed from 2469 of 2489 identified DNA coding regions from the Streptococcus pneumoniae type 4 strain genomic sequence appearing as ABS56454. Also included are an antibody which binds one of the proteins, treating a patient by administering the protein, DNA or antibody (in a composition), a kit comprising first and second primers, which are the nucleic acid cited above or fragments between nucleotides 8-100 of a sequence not defined in the specification, for amplifying a target sequence contained within a Streptococcus nucleic acid sequence,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                             New proteins and nucleic acid molecules from Streptococcus pneumoniae, useful as medicaments for treating or preventing a disease or infection due to streptococcus bacteria, such as pneumonia, sepsis, otitis media
                                                                                                                                                                                                                                                                                                                                                              Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Bacterial meningitis; pneumonia; sepsis; otitis ear infection; antiinflammatory; antibacterial; auditory; respiratory; gene therapy; vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Masignani V, Tettelin H,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Streptococcus pneumoniae type 4 strain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S. pneumoniae type 4 strain protein from coding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              11-FEB-2003
